OBJECTIVE

To work as a Frontend Developer, with a focus on building modern, high-performance, high-quality interfaces.

EDUCATION

Associate Degree in Systems Analysis and Development

Anhanguera College of São Bernardo | 2022-2024

LANGUAGES

English: Advanced

EXPERIENCE

Front-End Developer | Moove Hub Technology / Technology and Investment Holding

January/2025 - October/2025

I worked on the development of the official Osten Moove website using React, being responsible for structuring the application's navigation through React Router. I performed layout adjustments and code maintenance on a blockchain-based digital signature platform already in production, with improvements that significantly impacted the end-user experience. I also participated in the development, from the early stage, of a corporate communication platform, building reusable components and implementing REST API integrations via Axios, using React Query and mutations for cache management and real-time data synchronization.

I also contributed to the initial development of a mentoring platform in JavaScript and TypeScript, using Redux and Context API for application state management, in addition to React Hook Form and Zod for building and validating forms. I maintained active participation in daily agile ceremonies (Scrum) and peer code reviews, working closely with cross-functional teams, and used Git and Azure DevOps for version control and activity management, including opening pull requests and managing sprints.

Software Developer (PHP) | Education One - Grupo Well

March/2026 - Jul/2026

I worked on the maintenance and evolution of an educational management system used by several schools, directly contributing to the tool's stability and operational continuity. I identified and fixed a database synchronization issue that caused already-paid monthly fees to reappear as pending for parents and guardians, preventing the risk of duplicate charges and financial loss for the platform's clients.

I was responsible for creating and optimizing SQL queries for data validation and integrity, and for organizing and documenting tasks via Jira, in a Kanban workflow, including opening and following up on pull requests, and I worked with existing CI/CD pipelines via GitHub Actions.

IT Support Intern | Subprefeitura do Ipiranga (Ipiranga District Office)

June/2023 - June/2024

I worked in technical IT support, providing direct assistance to users with a focus on solving day-to-day issues. My activities included equipment, cabling, and peripheral replacement, as well as installation and configuration of operating systems, document backups on computers, printers, and local networks, ensuring the continuity of the department's administrative activities through agile and efficient technical support.

SOFT SKILLS

- Strong attention to detail, with focus on quality and consistency
- Logical reasoning and willingness to research and solve problems
- Ease of learning and adapting to new technologies
- Technical communication with cross-functional teams
- Collaboration and teamwork in agile environments

SKILLS

Front-end: React.js (Hooks, Context API, componentization), JavaScript (ES6+), TypeScript, React Router, Redux, React Query, Axios, React Hook Form, HTML5, CSS3, Tailwind CSS, Styled Components, Vite

Back-end: Node.js, Express, SQL, MySQL, REST APIs, PHP

Tools: Git, GitHub, Azure DevOps, GitHub Actions, Docker, Linux (Ubuntu)

Methodologies: Scrum, Kanban

ADDITIONAL EDUCATION

Front-End Development with React Career Track (Alura): In progress | Comprehensive training covering fundamentals, React/JSX, TypeScript with architecture and advanced testing, and performance/scalability/technical leadership (400h)

Software Engineering (FIAP Nano Course): In progress | Development processes, requirements, UML and software quality fundamentals (100h)

PROJECTS DEVELOPED

NoteMe: Task Manager: React, JavaScript, Tailwind CSS, React Router
